

Knauf Betokontakt

Knauf Betokontakt is a polymer based product designed to pretreat backgrounds which are smooth or have limited suction. It is a viscous liquid containing silicone sand, red in colour. Can be applied with a brush, roller or by spraying.

The product is air drying and normally dries within 2–4 hours depending on conditions.

Knauf plasters should not be applied until the primed surfaces are dry. Available in part pallet quantities.

Estimating Guide: Up to 70m² per bucket. No need to dilute.
