

Knauf High Suction Plaster Primer

Knauf High Suction Plaster Primer is a polymer based product designed to pretreat backgrounds of high suction. The primer is a viscous liquid, yellow in colour and can be applied with a brush, roller or by spraying.

Depending on the suction of the background, dilute the Knauf Primer with water at a ratio of 1:2 to 1:5. The primer is air drying and normally dries within 2–4 hours depending on conditions.

Knauf plasters should not be applied until the primed surfaces are dry. Available in part pallet quantities.

Estimating Guide: Up to 150m² per bucket (based on 1:1 dilution).

Bucket Size	Article No	Pallet Details
