

# Woodfibre Bitumen Fillets

Use with any roof board in built up roofing construction

**Bitumen Fillets** are available in a range of sizes to provide the necessary profiles at roof upstands.

Fillets are quadrilateral in shape and are manufactured from 24mm thick board. This method of manufacture ensures that the presence of small amounts of mortar, for example, at the junction of the roof deck and upstand, does not interfere with the correct seating of the fillet, as illustrated opposite.

Supplied by

## Boxed in 2 quantities

48 strips per box 58.5 lineal metres

30 strips per box 36.5 lineal metres

Strip Size 50 mm x 50 mm x 1220 mm
